

# ROS 2 EXECUTION

INGO LÜTKEBOHLE

BASED ON WORK WITH:

TOBIAS BLASS, JAN STASCHULAT, RALPH LANGE AND  
CHRISTOPHE BOURQUE BEDARD

*To achieve (real-time) guarantees, execution must be deterministic.*

# BACKGROUND

*The content in the following slides is accurate for all ROS 2 versions up to, and including, the upcoming Eloquent release.*

# ROS 2 Execution

## Expectations on execution

- ▶ Sources of (framework-level) events
    - ▶ Timers
    - ▶ Messages coming in
  - ▶ All other things being equal, we expect reactions to events in the order of occurrence
  - ▶ For real-time, a reaction must always occur within a certain time-frame
  - ▶ Recall ROS 1
    - ▶ Network thread inserts messages into queue upon complete reception
    - ▶ Callbacks for a message are executed in registration order
    - ▶ For timers, inserted into queue upon firing
- This is, essentially, *best-effort FIFO*

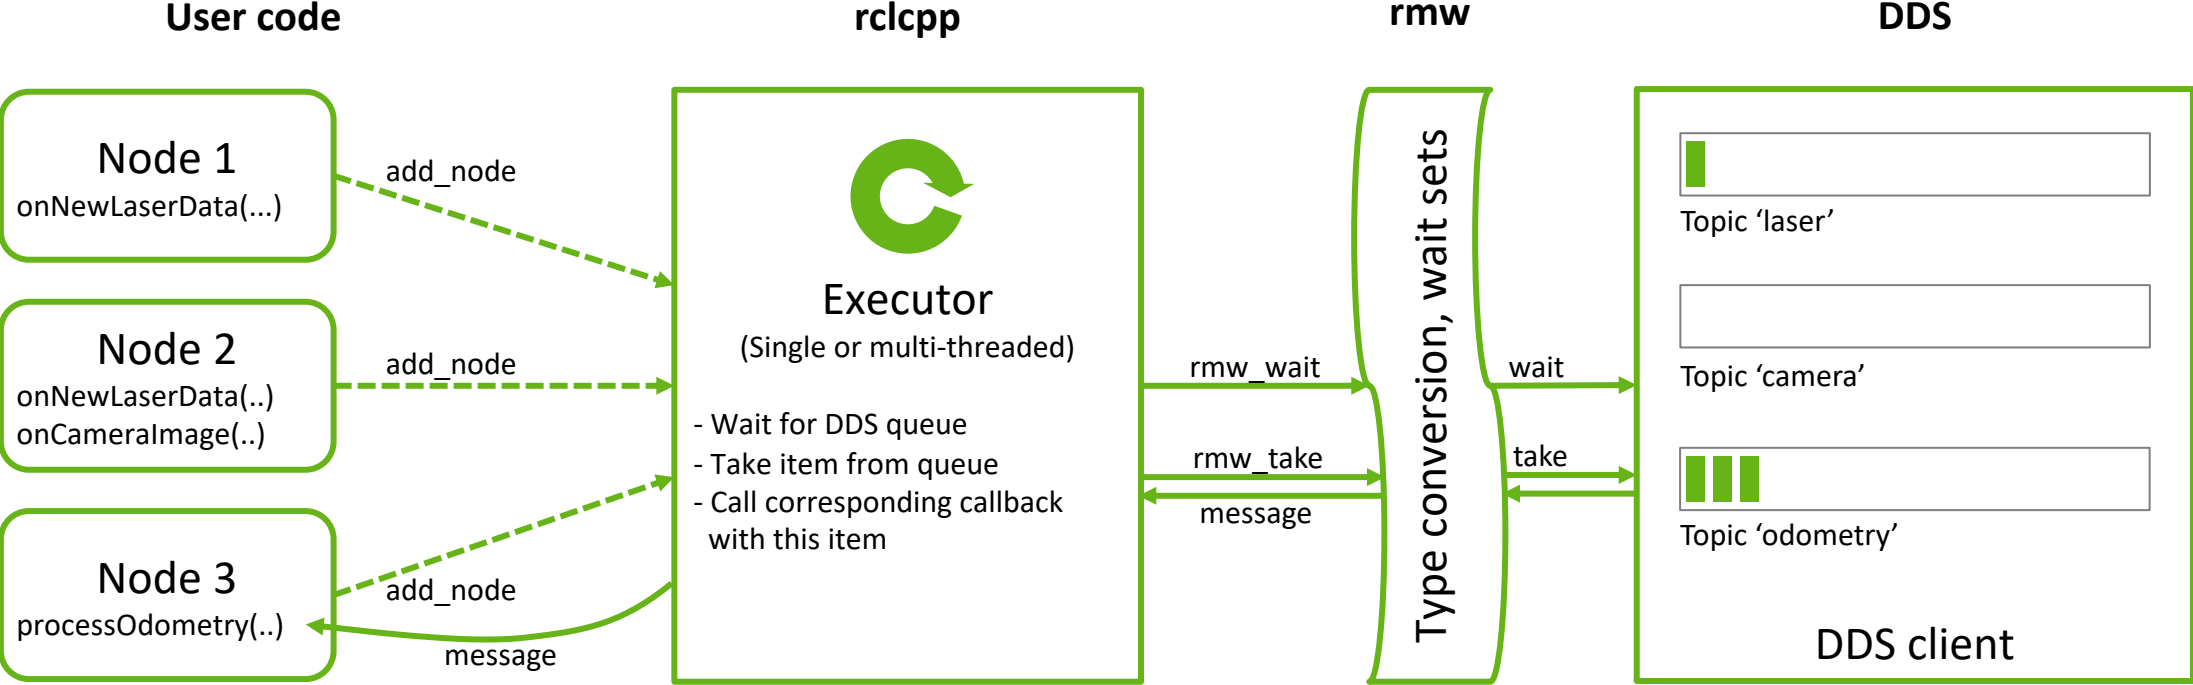

# ROS 2 Execution

## Expectations on execution in ROS 2

- ▶ What do we expect ROS 2 to do?
- ▶ Without special configuration? → Same as ROS1
- ▶ But with more capabilities...
  - ▶ Maybe priorities, some topics are more important
  - ▶ Maybe guarantees on latencies
  - ▶ Maybe use DDS-send-timestamps to reduce network effects...
  - ▶ In general, „more deterministic“
  - ▶ And, of course, zero-copy, etc. pp.
  
- ▶ Unfortunately, none of the above is provided

# ROS 2 Execution

## How ROS 2 places the executor

# ROS 2 Execution

## Part 1a: Collect event status

- ▶ `rmw_wait` is similar to `select/poll`
  - ▶ „Given a list of communication identifiers, tell me which ones are ready to process“
  - ▶ Note: Binary information
- ▶ Data structures strongly influenced by lifetime considerations
  1. Nodes *contain* timers, subscriptions, services, etc.
  2. Executor holds *weak\_ptr*'s to these
  3. During spin, the so-called „memory strategy“ obtains *shared\_ptr*'s
  4. The RCL and RMW layers only see plain „C“ pointers

Node	Subs	A
Executor	<code>weak_ptr&lt;Sub&gt;</code>	A
MemoryS	<code>shared_ptr&lt;Sub&gt;</code>	A
RMW	<code>rmw_subscription_t*</code>	A

# ROS 2 Execution

## Part 1b: Information flow through the layers

weak_ptr<Timer>	T0	T1	T2	
weak_ptr<Sub>	A	B	C	D
weak_ptr<Svc>	S1	S2	S3	S4

Executor

wait\_for\_work

shared_ptr<Timer>	T1	T2	T3	
shared_ptr<Sub>	A	✗	C	
shared_ptr<Svc>	S1	S2	✗	✗

Memory Strategy

rcl\_wait

rmw_subscription_t*	A	✗	C	
rmw_service_t*	S1	S2	✗	✗

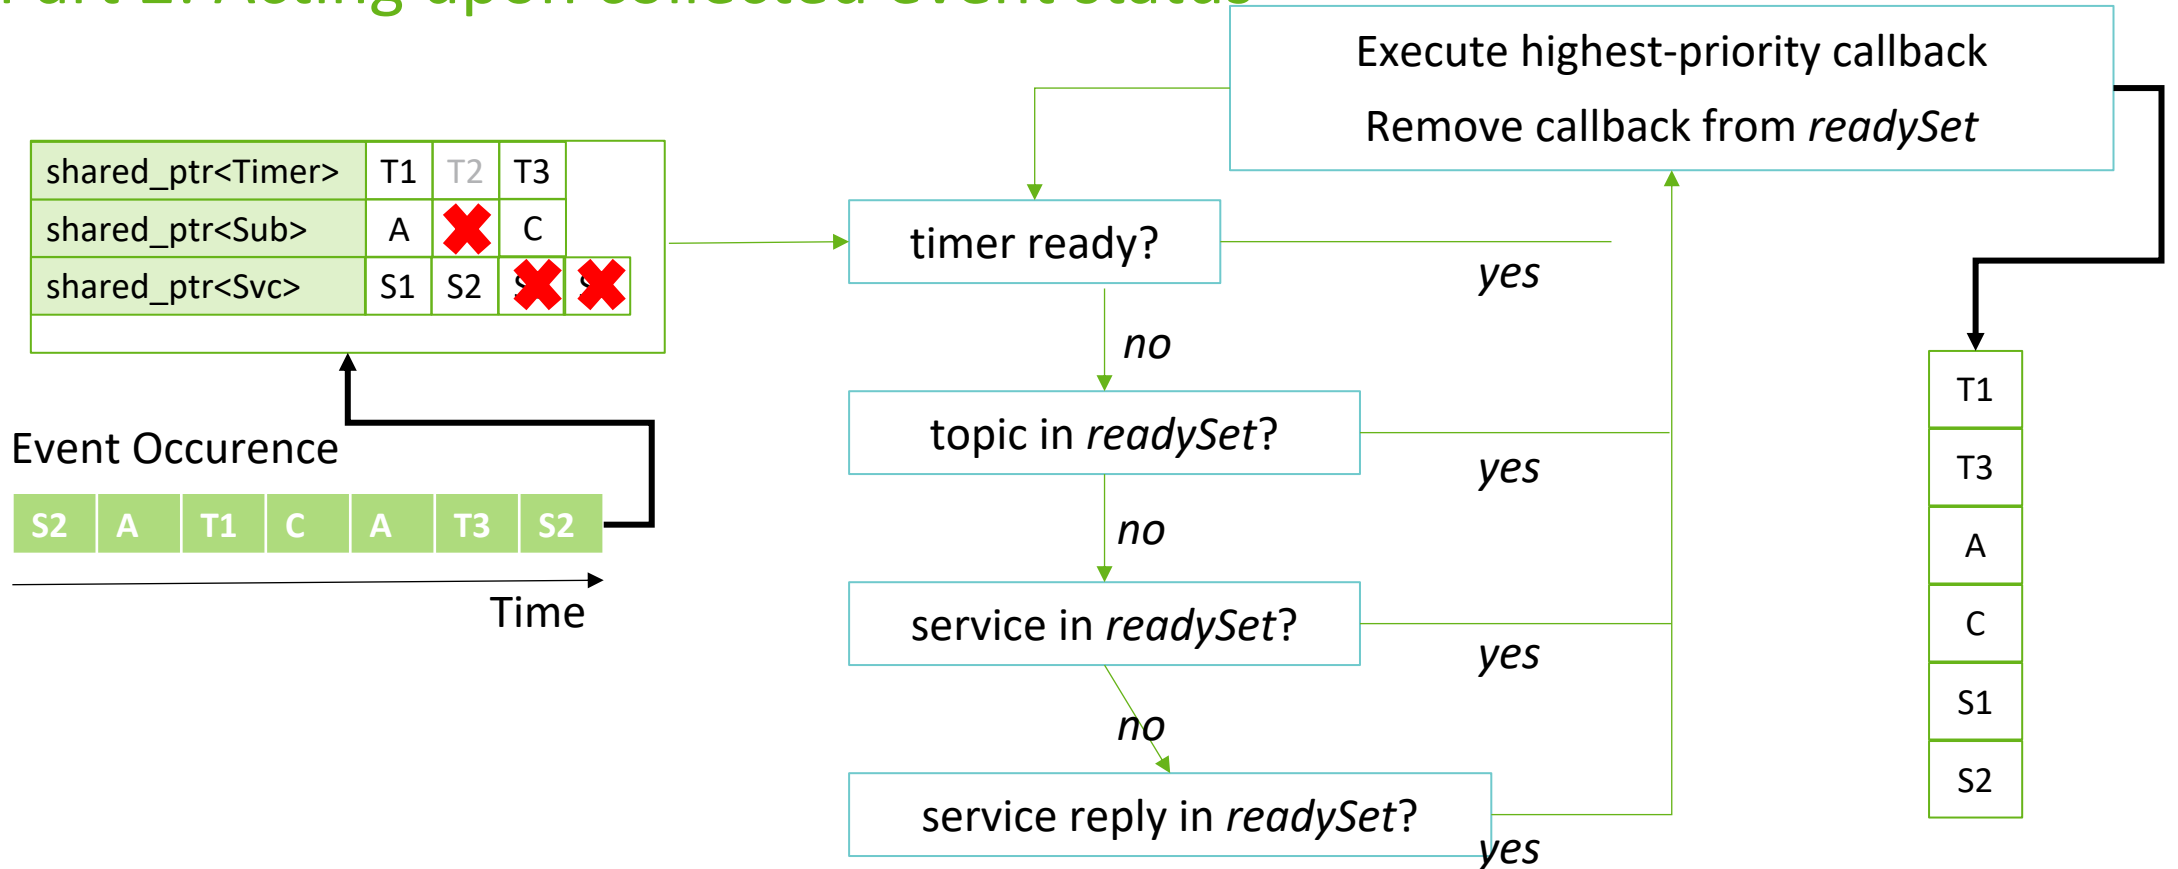

rmw

Events

# ROS 2 Execution

## Part 2: Acting upon collected event status

# ROS 2 Execution: Determinism

## Effects of longer queues

L	M	H	SH	SL	L	M	H	SH	SL
1	2	3	4	5	6	7	8	9	10

  

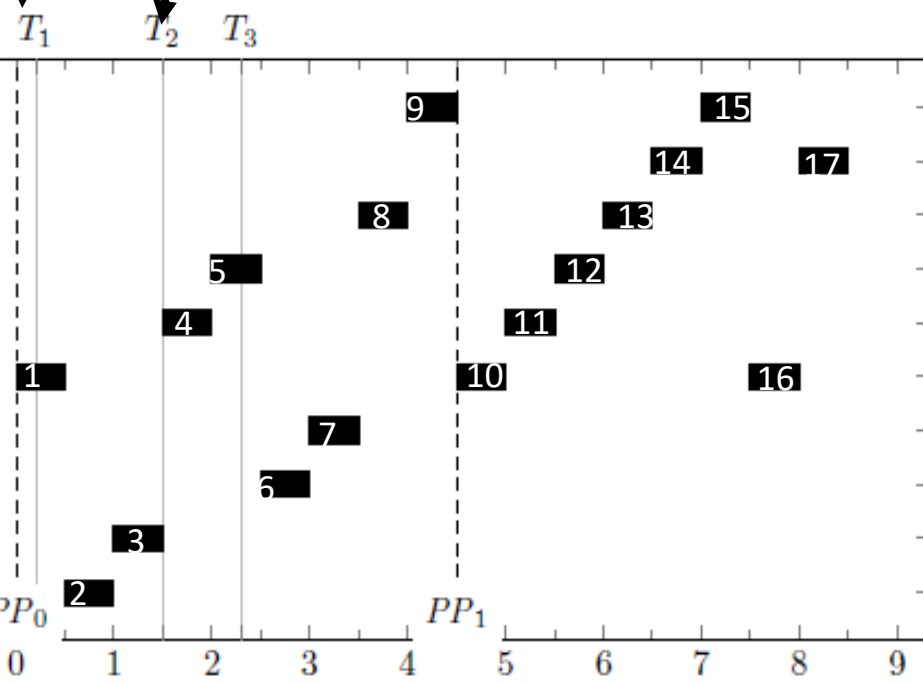

5	4	1	8	9	12	11	10	13	15
---	---	---	---	---	----	----	----	----	----

SM	SM	H
11	12	13

14	17	16
----	----	----

See Casini, et al, ECRTS 2019, „[Response-Time Analysis of ROS 2 Processing Chains](#)“ for details. This applies to ROS 2 Crystal and Dashing.

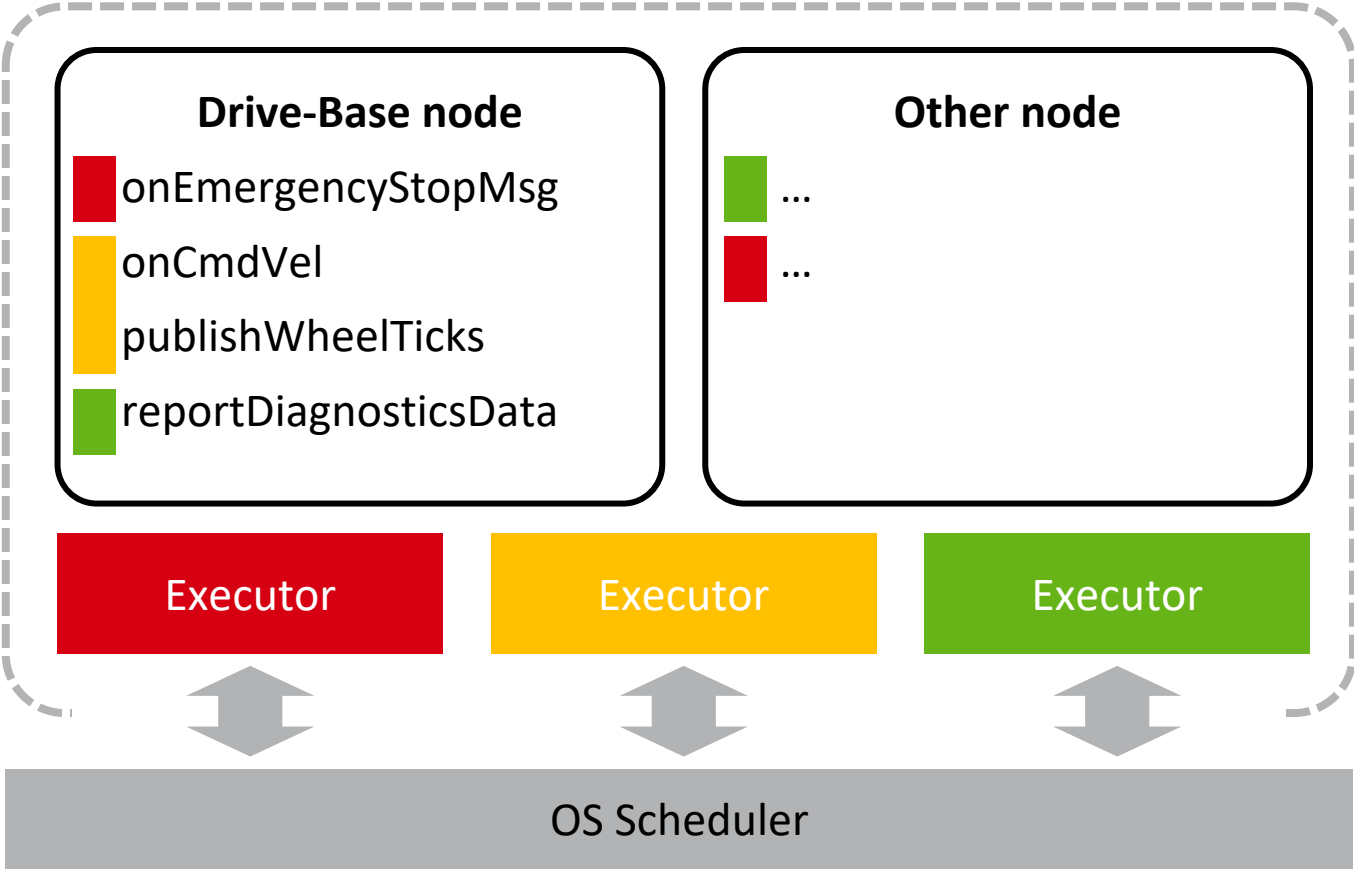

# ROS 2 Execution: Determinism

## What do we do?

- ▶ Our current work
  - ▶ Improve the RMW API or the Executor/RMW work-split
- ▶ Coping mechanisms until then
  - ▶ Callback-group level executor
  - ▶ Architect your system around this

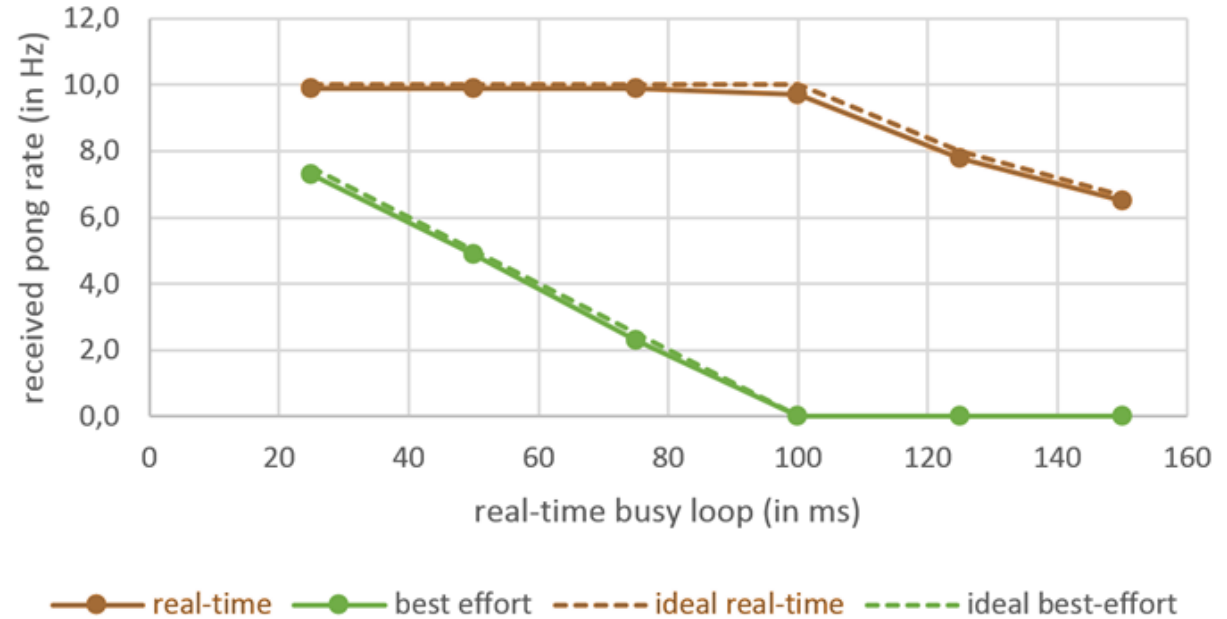

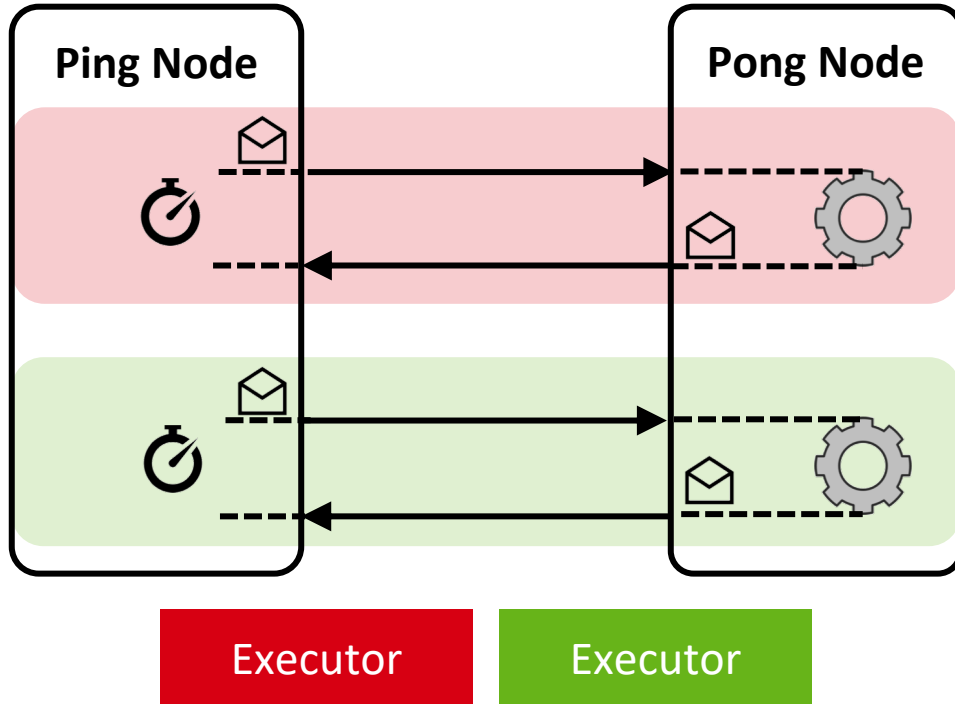

# ROS 2 Execution

## Callback-group level executor

# ROS 2 Execution

## Effect of priorities

[github.com/boschresearch/ros2\\_examples](https://github.com/boschresearch/ros2_examples) → meta-executor

# ROS 2 Execution: Determinism

## Where do go from here?

- ▶ We need a better RMW interface
  - ▶ See <https://github.com/ros2/design/issues/259> for the current discussion
  - ▶ Essentially, we need more information than what's currently in the `wait_set`
- ▶ We need to update the communication status info *predictably*
  - ▶ For example, after every callback, or at regular intervals
  - ▶ It could always happen that something arrives which needs to be processed before the things we already know about
  - ▶ Right now, this is prohibitively expensive, however
- ▶ Maybe we also need different execution models to make things simple
  - ▶ For example, static order, or reactive execution (see Andrzej's talk), etc.

**Please participate in the discussion!**

# ROS 2 Execution: Determinism

## Contact

- ▶ E-Mail: [ingo.luetkebohle@de.bosch.com](mailto:ingo.luetkebohle@de.bosch.com)
- ▶ Meet us at the Bosch booth
- ▶ Check out our related talks
  - ▶ Zero-Copy MW talk, Friday 14:00, Track 2
  - ▶ Micro-ROS talk on Friday, 14:40, Track 2
  - ▶ Many other relevant talks in track 2 as well

Bosch booth is #16.  
We're there during breaks.
